

VEDIC MATHEMATICS

~ (Dibjot Kaur XII-C) ~

Reporter, Modern School Life Magazine

November 27, 2017

VEDAS ARE ANY of the four collections forming the earliest body of Indian scripture which codified the ideas and practices of Vedic religion and laid down the basis of classical Hinduism. Vedic mathematics is the name given to the ancient system of calculations which was rediscovered from the Vedas.

On 27th November, 2017, the tutorial of Vedic maths was conducted by Mr. Pranav of the Career Launcher branch of Patiala. They introduced students of class 11th and 12th with very easy and interesting ways of calculations based on Vedic maths. He further added that Vedic mathematics is going to be of great help to the students to calculate much faster as compared to the conventional system. He said that students will be able to do seemingly difficult calculations like 998×997 in the split a second which will make remarkable difference to their confidence and self esteem.

Students listened to the lecture curiously and interestingly. After giving the tutorial for 30 minutes, the students were given the feedback forms to fill. It is a very good step taken by Career Launcher to connect the children with history of India and most importantly with mathematics.

By applying Vedic mathematics students can easily compete the future contests.

Best of Luck to all the students for their future endeavor
